S 2205-1 U (A)

1981 IDAHO AGRICULTURAL STATISTICS

STATE OF IDAHO

Office of the Governor

Boise, Idaho

TO THE PEOPLE OF THE STATE OF IDAHO:

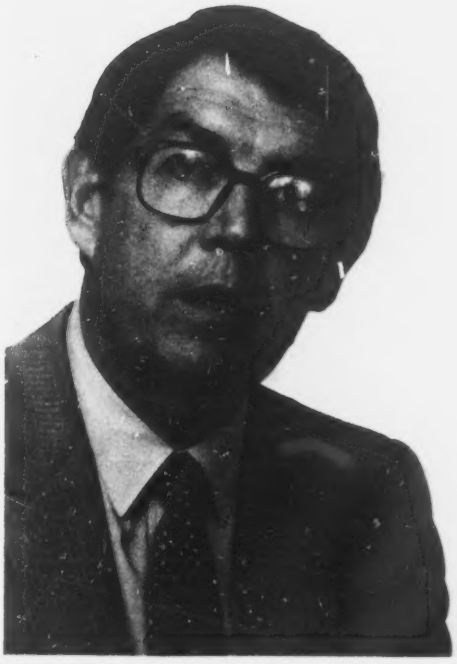
During the past year, as your Governor, I have had the great opportunity to represent our State in many areas of the United States as well as in foreign countries. Our recent trade mission to China provided the opportunity to project Idaho as a reasonable and reliable source of food and fiber. The mission indicated that in addition to the food and fiber we produce for our domestic use, there are large populations outside our borders that not only need our food and fiber but also seek a higher standard of living through adapting our technologies to their countries.

This publication was used during our trade mission to graphically show the strength, diversity and quality of Idaho's agricultural production. It was a valuable tool to not only show how much of an item could be produced but what the final product looked like or how the fields or livestock appear.

Our State Department of Agriculture, along with the Crop and Livestock Reporting Service, is to be congratulated on publishing this fine series of bulletins. However, those efforts are directly hinged upon the cooperation of the agricultural people in Idaho, for it is they who provide the basic data for this publication.

Sincerely,

JOHN V. EVANS
Governor
State of Idaho



OFFICE OF

THE DIRECTOR OF AGRICULTURE

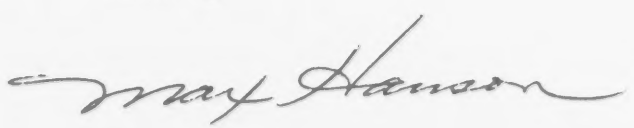
Boise, Idaho

It is with great pride that I am able to share this numerical description of Idaho's agriculture with you. The bulletins during the past number of years have been used to highlight one particular part of Idaho's food and fiber producing industry. Agriculture is by far the major industry in the state, and this bulletin definitely confirms that fact.

This year, the many fruit crops and other specialty items are the featured attraction. Our cover and the picture on this page certainly recognize our apple industry as will the data and pictures on the following pages represent peaches, cherries, etc. While production of many of these items is not number one in the U.S., they are important. Apple production at 150 million pounds in 1980 was only eleventh in the country as for rank, but was valued at almost 20 million dollars. Idaho is third in both hops and mint production and when combined with Malheur County, Oregon, is second in onion production and first in value of onions. These are indeed important totals that add to the economy of the state.

This publication is the result of our cooperation with the Idaho Crop and Livestock Reporting Service and we sincerely appreciate their efforts. It, however, is the primary product of the many farmers and ranchers along with the agribusiness who supply the basic data for the estimates. The business of agriculture is too complex today to try and market the crops or livestock without the type of accurate data shown in this publication. I want to take this opportunity to thank each and every one of those who provided the data and hope each of you, the reader, will find the bulletin useful.

Sincerely,



MAX HANSON, Director
Idaho Department of Agriculture

IDAHO AGRICULTURAL STATISTICS

1981

UNITED STATES DEPARTMENT OF AGRICULTURE

Richard C. Max, Statistician In Charge
Douglas A. Hasslen, Ass't. Statistician In Charge
Linda Simpson and Carla Eggers, Editors

This is the ninth edition in the series of Idaho Agricultural Statistics. This bulletin is published for you, the user of those estimates depicting Idaho's agricultural industry. While this publication is a cooperative agreement between the Idaho Department of Agriculture and the Statistical Reporting Service, it is for the most part a product of all of those in agriculture especially the farmers and ranchers who provide the basic information. That information comes from those who complete written questionnaires, answer questions by telephone or answer them when someone comes to call. Each method of securing information requires time on the part of the respondent. Sometimes it is time in the very busy part of their work day. To all of those who completed questionnaires, from all those who use the information, a special thank you.

Idaho is known as the State that produces more potatoes than any other, but it is also a pleasure to look at the cover along with the other pictures in the special section and realize that Idaho can and does produce many high quality crop items. It is important to note that while not being the leader in production it is certainly an important factor.

A special note of thanks to Bill Grange for the pictures he supplied and also his help in selection of the pictures.

Sincerely,

Richard C Max

RICHARD C. MAX
Statistician In Charge

TABLE OF CONTENTS

GENERAL
- Agriculture in Idaho 4
- Idaho's Rank in the Nation's Agriculture 5
- Number of Farms and Land in Farms, 1930-81 5
- Number of Workers on Farms 6
- Farm Wage Rates 6
- Gross and Net Income from Farming 7
- Farm Production Expenses 7
- Cash Receipts from Farm Marketings, by Commodities 8
- Prices Received for Farm Products 9-11
- Mt. St. Helen's in Idaho 23
- Crop and Weather Summary for 1980 24-25
- Idaho Average Monthly Temperatures and Departures 26-27
- Idaho Average Monthly Precipitation and Departures 28-29
- Crop Reporting Districts 30

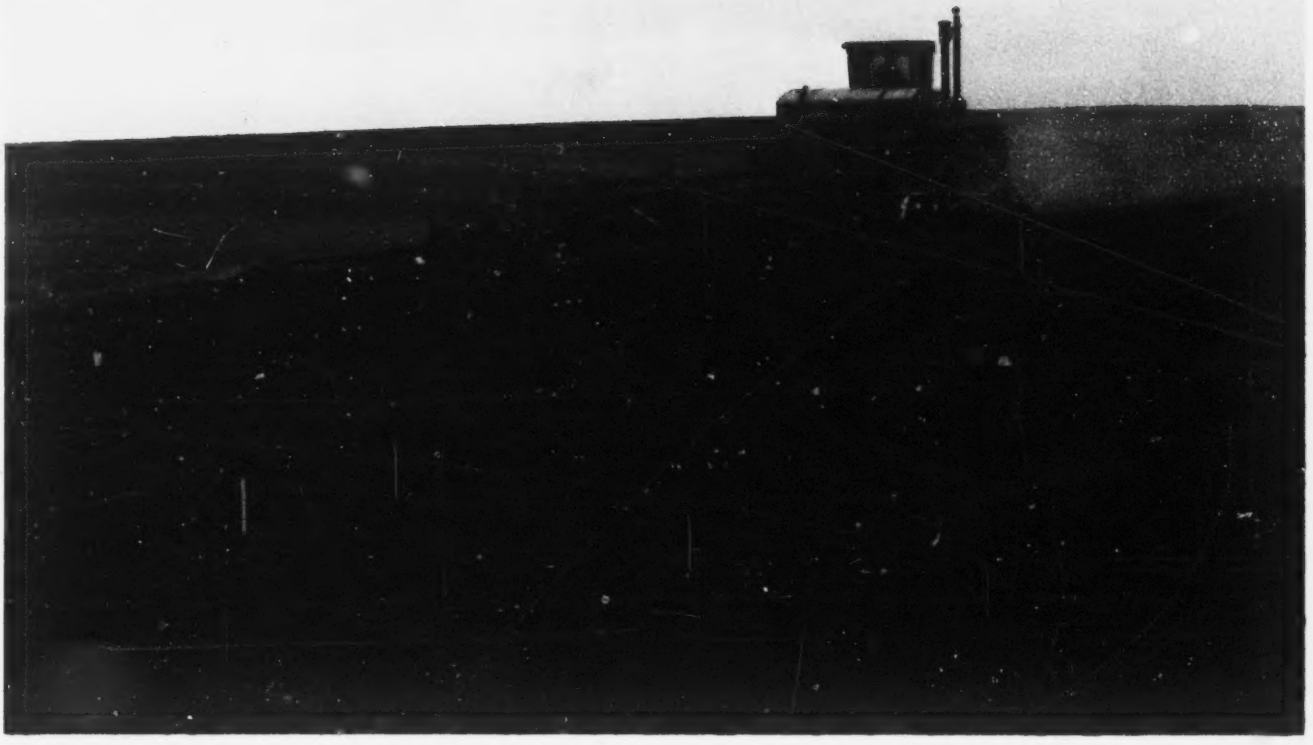
- Pelts Produced, by Color Class 69

FERTILIZER
- Consumption 70

TROUT
- Foodsize Total Sales 71

AGRICULTURE IN IDAHO



Idaho's agricultural producers enjoyed a good year in 1980. Certainly, there were some segments of the community that did not fare as well as others. Crop production was generally better than livestock production.

In the crops area, Idaho ranked in the top ten States for eighteen crops. Idaho became the number one barley producing State in 1980, joining potatoes as a National leader. Ranking second nationally are lentils, dry edible peas and alfalfa seed. Production of crops for which Idaho had third place ranking are Kentucky bluegrass seed, dry edible beans, hops, mint and sugarbeets. There were eleven crops for which Idaho produced ten percent or more of the U.S. total production.

In the area of livestock, there were five commodities that ranked among the top ten nationally. Idaho is the number one trout producing State. The other four ranked commodities were American cheese, mink, wool and sheep and lambs.

All of these, plus the many other commodities not specifically mentioned, add up to make Idaho agriculture a very important part of the Nation's agriculture.

IDAHO'S RANK IN THE NATION'S AGRICULTURE — 1980

Commodity	Rank Among States	Production	Unit	Percent of U.S.
CROPS				
Potatoes	1	78,455,000	Cwt.	26.1
Barley	1	58,960,000	Bu.	16.4
Lentils	2	507,000	Cwt.	23.7
Dry Edible Peas	2	1,449,000	Cwt.	44.1
Alfalfa Seed	2	14,220,000	Lb.	13.9
All Kentucky Bluegrass Seed	3	13,610,000	Lb.	27.2
Dry Edible Beans	3	3,329,000	Cwt.	12.8
Hops	3	5,488,000	Lb.	7.3

Workers Paid by Piece-Rate	[2]/	[2]/	3.70	[2]/
Workers Paid by Hour, Day, Week and Month	3.51	3.49	3.45	3.81
Workers Paid by Hour only	3.42	3.45	3.60	3.76
Workers Receiving Cash Wages only	4.00	3.75	3.75	4.15
Workers Paid by Hour Receiving Cash Wages only	3.16	3.64	3.60	3.79

[1]/Average of wage rates for all methods of payment are on a per-hour basis.
[2]/Insufficient data for this category — data included in all hired farm workers.

Total gross farm income in Idaho in 1979 totaled $2,055.3 million, over 20 percent above the 1978 figure. This was partially offset by $1,668.9 million of production expenses which rose 19 percent above the previous year. The most dramatic change in expenses occured in livestock purchases which jumped 75 percent in one year and was over three times the total recorded in 1977. Feed expenses topped $185.7 million, a 37 percent increase during this same period. Fertilizer and lime expenses registered a more modest 2 percent increase to $122.2 million. This resulted in a total net farm income of $392.1 million, an 18 percent gain in one year.

GROSS and NET INCOME FROM FARMING: Idaho, 1975-79

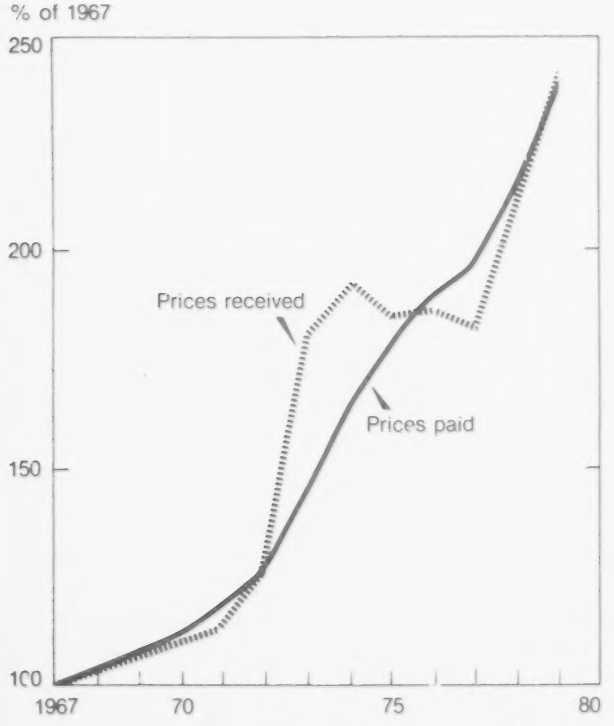
Prices Received and Paid by Farmers



Prices paid includes commodities and services, interest, taxes, and wage rates.

Prices Received and Paid by Farmers

	1976	1977	1978	1979
	Percentage of 1967			
Prices received	186	183	210	241
Farm products:				
Crops	197	192	203	223
Livestock	177	175	216	257
Prices paid	187	196	212	240

Prices paid includes commodities and service, interest, taxes and wage rates.

Prices received by farmers in 1979 increased 14.8 percent, following a 14 percent increase in 1978. Strong foreign demand brought wheat prices to the highest levels since 1974. Cattle prices reached record high levels in 1979 after a 3-year decline in supply of cattle for market. Prices paid by farmers continued to rise in 1979, with a 13.2 percent increase; this followed an 8.1 percent increase in 1978. Crop prices received by farmers in 1980 averaged slightly above 1979 except for potatoes and hay. Potatoes averaged $4.40 per cwt. in 1980, the highest level in several years. Hay averaged $63.00 per ton and early in the year was twice the comparable month in 1979.

Dairymen experienced excellent milk prices in 1980 while beef cattle ranchers sustained mostly lower prices than the previous year.

Higher prices received were off-set by generally higher feed and fuel prices.

IDAHO'S SPECIALTY CROPS

Idaho's unique climate and geographic location provide farmers with many options when making cropping decisions. In addition to potatoes and barley, Idaho is a leading producer of many other commodities — a variety not many States can claim. Among specialty crops, Idaho ranks third in mint oil and hops production, sixth in sweet corn, seventh in onions, and eleventh in apple production.

Mint acreage and production has been increasing steadily since the early 1960's. When peppermint acreage estimates started in 1962, there were only 700 acres. In 1980 the acreage had risen to 8,300 acres. Spearmint acreage peaked in 1978 with 7,200 acres but has since declined to 3,100 acres.

Hops are grown in only four States in the U.S. Idaho's hops and high country barley are popular with most of the Nation's brewers, and many bales of hops are also exported. The soil of southwest Idaho is well suited to the growing of quality onions. Growers there claim to raise the biggest and best quality Sweet Spanish onions in the country. Harvested in late summer and fall, these onions have good storability and make up the bulk of counter sales at grocery stores throughout the winter months.

Idaho fruit growers enjoy a climate similar to the famous Yakima Valley in Washington, where some of the best noncitrus fruit is grown. The 1980 Idaho Commercial Fruit Tree Census showed 1,237,425 fruit trees in 218 commercial operations. This was a 10 percent increase in the number of trees since the last census taken in 1978. Apples remain the leading commercial fruit, with 69 percent of the total fruit trees. Following apples in order by tree numbers are: peaches, plums, sweet cherries, prunes, pears, sour cherries, apricots and nectarines.

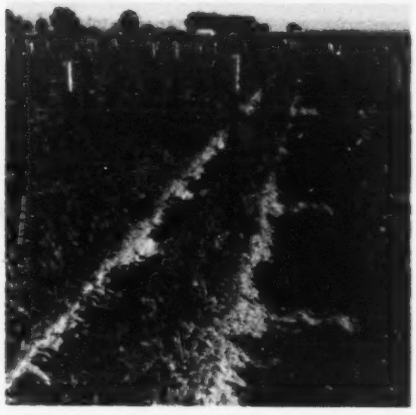
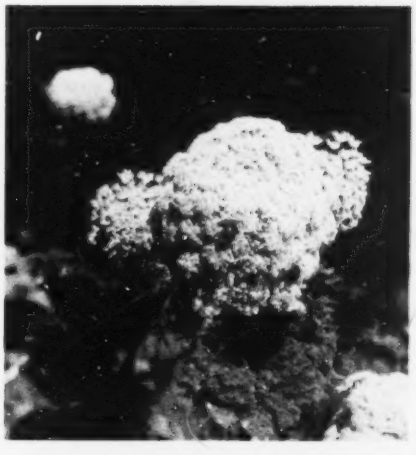
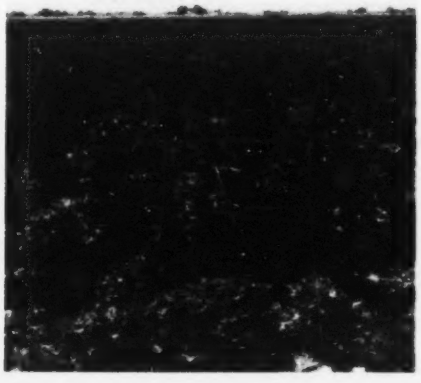
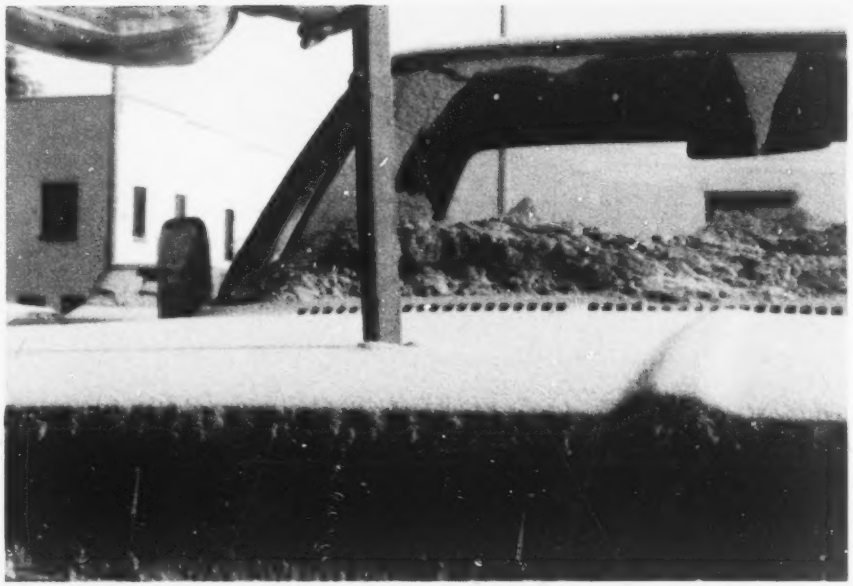
[1/] 400,000 lbs. of 1959 production was not harvested due to low prices. Value of production excludes the 400,000 lbs.









These two pictures illustrate the depth of Mt. St. Helen's ash in parts of Benewah County.

The eruption caused little crop damage, but kept many north Idaho residents busy learning to cope with it.

One year later, ash was still visible on side roads and railroad tracks.

MT. ST. HELEN'S STARTLES NORTH IDAHO IN 1980, BUT CAUSES LITTLE DAMAGE

The erruption of Mount St. Helens on May 18 was followed by an ash fallout that stretched across central Washington, the Idaho Panhandle, western Montana and into Canada. Damage to young pea and lentil seedlings was the first concern, however, the most widespread problem was the abrasive effect on motors and other machinery. The ash depth varied from a trace to 40 tons per acre in parts of Kootenai County. No major feeding problems occurred with cattle out on the range although sore eyes and skin irritations were common. Late May rains helped wash the dust off the more mature pea and lentil plants, but the smallest plants were lost.

Although Mt. St. Helens dominated the weather picture for the State, farmers still watched and braved many natural elements. The New Year was ushered in by normal or above normal temperatures; averaging in the upper 20's. Light precipitation fell in the Panhandle and southwest regions. Farming activities were minimal with the majority of the work involving routine maintenance and crop marketing. Livestock operators were busy preparing for early calving and lambing activities. Heavy precipitation fell the second and third weeks of the year; posing problems for newborn calves. As January waned, more ewes moved into lambing sheds.

Above normal temperatures continued until the last few days of January when subnormal temperatures resulted in threats to newborn calves and lambs. Calf and lamb losses increased as temperatures dropped to 18 degrees below normal. Feed supplies became tight in some areas when supplemental feeding became necessary. Light snow cover on the winter wheat was common as precipitation levels continued below normal for most of February. Fruit growers monitored the dropping temperatures for possible freeze damage to peaches and grapes. Warmer temperatures returned the second week of the month thereby easing the threat to livestock and fruit trees. Feed supplies varied as to location; some operators fed other forages when hay supplies tightened and became expensive. Grain and potato marketing was active throughout February. Heavy precipitation late in the month caused flooding and erosion problems in eastern regions. The high water levels caused a few problems in potato storage facilities and delayed early spring fieldwork.

During March, farmers on the lighter soils in southwest and southcentral Idaho were able to prepare seedbeds for their spring seeded crops. By month's end, spring wheat and barley and sugarbeet planting was going strong. Onion planting in the southwest and dry pea planting in the central areas began between rainshowers. Winter wheat was rated in good condition although a few spotty fields were reseeded. Soil moisture levels were above normal and the outlook on irrigation water was very good.

Treasure Valley was the scene of a brilliant display of spring colors as the Valley's orchards were in full bloom during April. Onion and sugarbeet planting advanced steadily during the month. Early potato planting began as the irrigation canals were opened up in the southern valleys. By the end of the month, 15 percent of the potato acreage was in the ground. Favorable weather in northern and eastern Idaho, allowed farmers to begin plowing and planting spring crops. Barley, dry peas and lentils were two-thirds planted in the north by late April. Eastern potato growers started planting their crop by month's end. Calving was nearing completion; calves were branded and preparations made for the spring turnout. Shearing was very active as lambing drew to a close.

The first week of May saw the planting of all crops ahead of normal despite the scattered rainshowers. Rains were not unwelcomed since plant emergence levels took a big stride upward and range conditions greatly improved. Sugarbeet, onion, dry pea and lentil planting finished around mid-month. Cattle and sheep were on summer ranges with above average conditions. A hailstorm cut a swath through the southwest; damaging newly planted grain, sugarbeets and alfalfa fields. Before the end of May, potato planting and field corn seeding were both well advanced and one-fifth of the winter wheat crop had headed, and over half of the remaining acreage was in the boot stage.

The steady rain, beginning Memorial Day weekend, ran into the first two weeks of June. Potato and dry pea planting fell behind average. Winter wheat development was delayed and bean and corn fields in the Magic Valley yellowed. Potatoes were showing rhizoctonia in the east due to the wet, cool conditions. Sugarbeet thinning neared completion later in the month as weather conditions improved. The first cutting of alfalfa also advanced as the rain subsided. Spring grains were developing normally. Cherry picking began late in the month and continued until mid-July.

Range and pasture grasses continued to show good growth and many ranchers believed that the range was in the best shape in years. Potato and dry bean fields showed a marked improvement and were at near normal development. Processing vegetables were being planted in eastern Idaho. Emergence levels of all crops were at normal or just below normal development by late June.

Winter wheat maturity levels at the beginning of July were slightly behind schedule. Only a small percentage of the crop had begun to turn. Precipitation was light and scattered over many areas. Spring wheat and barley also began to turn as average temperatures ranged from 6 degrees below normal to 3 degrees above. The first cutting of hay was finishing and the second cutting going strong towards the end of the month. The hay supply in the north tightened up because of the ash fallout in the Columbia Basin and north Idaho hay fields. The ash did not damage the plants but limited the use of haying machinery. Pea and lentil fields which survived the fallout were in near normal condition. Apricot picking and apple thinning became active as cherry picking subsided. Potato fields were closing the middles and keeping pace with the average. Winter wheat harvest began in mid-July, along with mint and bluegrass. Stripe rust was becoming a problem in the winter wheat. Virus problems in dry peas surfaced about the time harvest commenced. Warm temperatures late in July boosted dry bean and corn growth. Ranges continued to supply good forage, but fire became a problem as the grass dried.

The hot, dry conditions continued into August; ripening grain and increasing the demand for irrigation. Sweet corn and onion harvesting began by mid-month. Dry beans were coming into bloom. Swathing had started in early areas. The second cutting of alfalfa was brisk. Dry pea and lentil harvests were active, but volcanic ash was causing drying problems in Kootenai County. Rainshowers in the latter part of August hampered harvesting but increased water supplies and improved the ranges. Combining of small grains resumed the last week of August as well as the harvest of mint, dry beans, sweet corn, and onions. Peach, pear, plum and prune picking started about this time. Apples were also coloring well. Early potato digging began in the southwest. Winter wheat drilling started on summer fallow grounds. Sheep were moved down from the summer ranges.

Small grain combining continued during September. Scattered rains and heavy dew slowed harvest progress in the north and east. Dry pea and lentil harvest was winding down with only a few fields remaining by the end of the month. Onion and sweet corn harvesting continued strong until slowed by mid-month rains. The rains interrupted the swathing of dry beans and cutting of alfalfa hay. Alfalfa and red clover seed harvests were also slowed. The added precipitation improved soil moisture levels for the planting of winter wheat and barley, but prolonged harvest. Strong regrowth of range grass was also a result of the rain. Apple picking began as labor crews finished up with the earlier fruits. Silage corn and hop harvest was active. Potato digging preparations increased with the advent of heavy frosts and the application of vine killing agents.

Above normal temperatures averaging in the low 60's started the month of October. Precipitation was almost zero in all areas the first two weeks; allowing time to harvest the remaining grain acreage. Lodging and sprouting were major problems in late fields. Potato digging moved forward; keeping up with the average pace of the last five years. Dry bean growers combined the acreage postponed by the September rains. Alfalfa and red clover seed harvesting also resumed at full speed. Corn silage cutting increased substantially, but corn for grain harvest was minimal until the end of the month. Sugarbeet digging was just underway. Red Delicious apple harvest started with color and size above average. Winter wheat and barley planting pushed ahead with good uniform stands emerging. A mid-October snow storm stopped all planting and harvesting in the eastern part of the State. The snow provided only a brief intermission for potato and sugarbeet harvest, and digging resumed in two days. By the end of the month, just over half of the sugarbeet acreage was harvested and nearly all of the potato acreage. Cattle and sheep were steadily moved off the summer ranges and into their winter feeding programs.

Warm, dry conditions early in November permitted winter wheat drilling on the remaining acres. Potato harvest finished up with the mild weather. Ranchers were busy weaning and vaccinating the spring calves while those with fall calving proceeded. Many operations were grazing their herds on crop residues. Sugarbeet harvest moved steadily and was virtually complete by the end of the month. Corn for grain harvest also pushed ahead. Below normal temperatures and scattered rain and snow showers, dominated the latter half of the month.

With fieldwork at an end for 1980, marketing and general winter chores occupied most farmers. Winter storm systems appeared in early December, dumping snow at most locations. Some plowing and fertilizing took place in the southwest but fieldwork was generally finished. Livestock feed supplies remained adequate throughout the month as 1980 drew to a close.

AN EXCELLENT YEAR FOR IDAHO CROPS

With volcanic ash covering everything in sight, Northern Idaho farmers were wondering just what kind of a crop year was in store for them. Well, the year turned out just fine — not just for North Idaho, but for the entire State. Record yields were set for most of the State's major crops. Grains in particular broke all kinds of records. In fact, in 1980 Idaho was the leading producer of barley in the country as well as the leading producer of potatoes and wrinkled seed peas. Record productions were set for wheat, dry beans, and lentils. Potatoes were the only crop showing a substantial decrease in production. This was due to a large decrease in acreage. The 1980 crop production index, at 141 (1967=100), is only 2 points below the record index of 1978, but 12 points above 1979.

Weather conditions for the most part were conducive for excellent crop growth and development. Cool, wet weather throughout late spring delayed plantings, but timely rains allowed crops to develop well all summer. Small grain harvest began in late July, slightly later than usual, but by late August harvest had advanced ahead of average. After a few weeks of cool, wet weather in September, excellent conditions prevailed throughout the remainder of the fall.

FIELD CROP SUMMARY: Harvested Acres, Yield, Production, and Value, Idaho, 1979-80

Crop	1979					1980				
	Harvested	Yield Per Acre	Unit	Production		Harvested	Yield Per Acre	Unit	Production	
				Total	Value				Total	Value[2]
	Acres			*1,000*	*1,000 Dollars*	*Acres*			*1,000*	*1,000 Dollars*
Corn for grain	50,000	88.0	Bu.	4,400	12,760	50,000	94.0	Bu.	4,700	15,745

IDAHO LIVESTOCK PRODUCERS EXPERIENCE MIXED YEAR

Highlighting Idaho's livestock industry in 1980 was the beginning of the rebuilding phase of the eighth cattle cycle since the turn of the century and a tremendous growth in both milk production and the hog and pig inventory. Prices slipped from the highs set in 1979 for many commodities, but were generally good for most of 1980.

All cattle and calves in Idaho totaled 1,990,000 head on January 1, 1981, the first year-to-year increase in numbers since 1975. Beef cattle prices averaged in the low sixties, slightly less than in 1979.

The December 1, 1980 hog and pig inventory inventory rose to 175,000 head, the highest number in ten years. However, the 1980 annual average price responded to the increased inventory and fell to $36.00 per cwt., the lowest price in six years.

Idaho dairymen produced a record 1,934 million pounds of milk in 1980. Number of herds and size of herds were steadily growing in the Magic Valley and the abundant alfalfa and barley provided ideal conditions for milk production. Much of the milk went into manufactured products, particularly cheese. Dairymen experienced an annual average price of over $12.00 per cwt., topping the previous high set last year. Replacement heifers averaged $1,230, almost double the 1978 average.

Sheep ranchers encountered the first increase in numbers in four years and also favorable prices. Sheep and lamb prices dipped slightly from last year while wool brought $.90 per pound, surpassed only by an annual average price of $1.00 received in 1951.

Cattle feeders faced competition from the expanding cow/calf producers as well as high interest, feed and labor costs. Steer and heifer buying prices declined to the mid-sixties, but cattle feeding was still very expensive and the profit picture was poor.

High retail beef prices in 1980 prompted consumers to switch to other protein substitutes such as poultry and egg. Poultrymen correspondingly increased their flocks and egg production.

Idaho became nationally known as a trout producing State in 1980. Nine out of every ten trout produced in the U.S. came from Idaho.

Honey production dropped in 1980. Mt. St. Helens smothered some colonies in the north and poor weather was responsible in the south.

RANGE and PASTURE CONDITION: First of Month, Idaho, April-November 1971-80

Year	April	May	June	July	August	September	October	November

[1]/Year ending June 30.

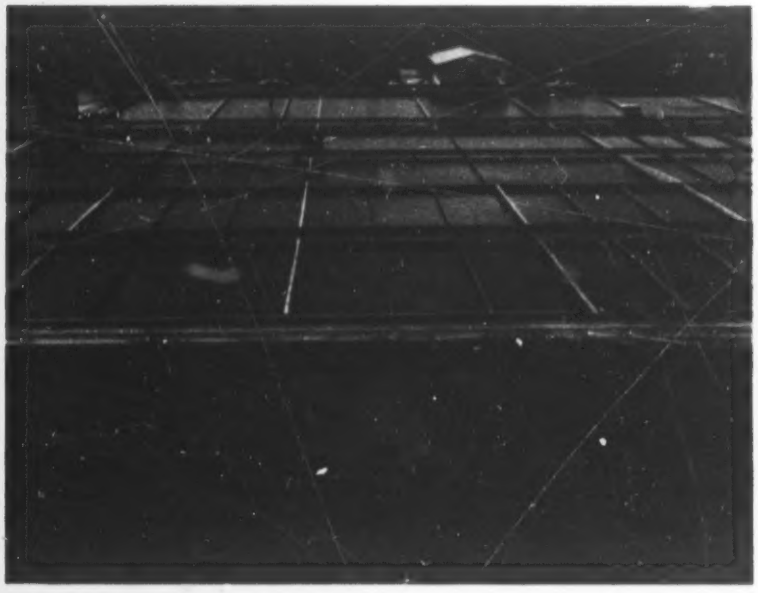
TROUT THRIVE IN IDAHO STREAMS

Aquaculture is the controlled cultivation of aquatic plants and animals. The origins of this practice date back over 4,000 years to ancient Near East and Chinese cultures. In the United States, commercial attempts at trout aquaculture were made over 50 years ago, while warm water aquaculture had it's genesis in the late 1920's. It started when a few individuals began to raise minnows to supply a growing demand for baitfish. Today the trout aquaculture has grown into an established commercial industry with the primary species being rainbow trout. Foodsize trout production in the United States totaled 48.1 million pounds liveweight during 1980. Of that total, 89 percent of the sales were to processors. Fee fishing and recreational sales accounted for 5 percent of the market.

Idaho's foodsize production totaled 42.8 million pounds, just over 89 percent of the National total. The price per pound averaged 68¢ for the year with processors controlling 99 percent of the Idaho market.



TROUT: Foodsize Total Sales, by Number, Liveweight, and Value, Selected States, 1980

State	Number Sold	Live-weight	Value	Average[1]/	
				Liveweight	Value per Pound
	Thousands	*1,000 Pounds*	*1,000 Dollars*	*Pounds*	*Dollars*
California	2,900	2,208	3,252	.76	1.47
Georgia	450	323	456	.72	1.41
IDAHO	65,093	42,787	28,999	.66	.68
Missouri	506	389	613	.77	1.58
Pennsylvania	1,370	1,210	2,203	.88	1.82
Washington	852	488	831	.57	1.70
Wisconsin	830	440	774	.53	1.76
Other[2]/	302	195	346	.65	1.77
TOTAL	72,303	48,040	37,474	.66	.78
